

Aphasia Research Study

Seeking people with aphasia for a speech and language therapy research study

The Shirley Ryan AbilityLab is conducting a research study to understand if **non-invasive brain stimulation** paired with a **speech and language therapy task** is an effective form of **treatment for post-stroke aphasia**.

If you should qualify, you will attend:

- 3-4 baseline visits, including an MRI
- 10 one-hour therapy sessions, daily for 2 weeks
- 3 follow-up visits (immediately, 6-weeks, and 12-weeks after therapy)

During the therapy sessions, you will wear a cap on your head and receive safe brain stimulation while completing a therapy naming task.

Compensation up to \$800 is provided.

Eligible Participants:

- Diagnosis of aphasia from a single stroke
- At least 6-months post stroke onset
- 18 to 80 years old
- Right-handed
- Fluent in English
- MRI safe
